PESTOMATIC CockmaX

How to Use :

1. Make dusting by powder-puff pump where the cockroach occurs and where presently hiding
2. It is a contact desiccant to the pest, kills by drying Cockroach naturally.
3. Safe for humans, use safety dust mask while applying the powder-puff at dusting.
4. Keep away from children in cool, dry, clean, moisture free place.
5. It is a slow release contact moisture absorbent to kill pest by making bugs dry, weak, thin, dull, slow, quiet, calm, movement less leading to death.
6. Immediate results may or may not be visible but it's long term remedy. Within 15 days, Repeat the same procedure again after 15 days to get long term elimination of Cockroaches . You will be free from Cockroaches along with other pests like bedbugs, termites, ants, lice, fleas & drywood termites.

[How to Use CockmaX](#)

CockmaX Powder Organic Natural powder it safely and organically kills and repels Cockroach. Its all natural formula and leaves behind no harmful residue and has no harsh pesticide alike smell. Application-Read entire label accordingly for indoor use. Use protective mask before dusting Treatment. Trigger powder-puff bottle of CockmaX powder aiming Cockroaches stay keeping away from person. Dust repeatedly by shaking well . Dusting shall be done with a slow,sweeping motion for best results make dusting when air is calm and work backward to avoid drift. Fan, AC air blow, wind current shall be avoided at application. Apply areas infested or areas where usually Cockroach occur. To create an artificial barrier to hiding, breeding areas directly spray in the cracks, corners , crevices and other similar areas. Give special attention to the breeding areas such as Kitchen trollies, wardrobes, idle furniture, wall portraits, calenders are wall mounted having empty hollow spaces behind electrical installations. Allow a few minutes for product to take effect. Repeat if necessary after some or 15 days. To reduce annoyance from Cockroach treat hiding and breeding areas where these pests may alight or congregate in similar manner.Do not wash flooring with water, vacuum-cleaning shall be avoided. It Contents Natural Diatomaceous earth.

General Application information of CockmaX as Dust and Liquid Spray :

1. Make survey & identify the problematic areas of Cockroach occurrence. We can stop entry in particular areas.
2. The Cockroach proofing is done by creating an artificial barrier to sleeping places to protect areas of their food & habitat
3. Break open seal of powder-puff bottle, Aim at Cockroaches, their staying places, make dusting to create an artificial barrier continuously at kitchen's or drainage by CockmaX powder without leaving any gap. Ensure the duster pump fitted with pipe at the top head. Attach If the duster pipe is detached. Puff duster is best applicator by this tool spread of powder is possible uniformly.
4. This material is solid & not soluble in water so dust all places where Cockroach can hide. At wall pieces, furniture's, cracks, empty spaces in such a way that it will remain there as powerful desiccant.
5. Dust CockmaX powder at all the linen placing stores, windows and door sides to take care of either hiding or entering in home or sleeping places.
6. Apply Dust at all the possible or hiding suspicious places wherever possible at top ceiling, & dust over the ground articles.

HOW TO USE :

1. CockmaX shall be dusted across areas where it is desired to prevent or discourage Cockroach from entering.
2. Preferably, the dusting shall be 10-30 cm wide, although generally the wider the spray barrier is the better.
3. In this manner, an odourless desiccant barrier is provided that Cockroach are reluctant to cross and die of drying if they cross.
4. Additionally a smaller amount of product may be scattered in diffuse or non-continuous manner just beyond the strip on any bedding, furniture on the side away from the area to be protected.
5. This added Dusting scattering of repellent serves to lessen the probability of occasional Cockroach wandering beyond the strip.

After use dispose the puff-bottle pouch by deep burial in jungle areas. First try to understand Biology habitat of Cockroach, later think of doing this as preventive measures for self-protection before application.

CockmaX : How to Use! SOP (Standard Operating Procedures)

24.11.18

Back ground Before Application of CockmaX try to know biology & habitat of Cockroach, then use CockmaX as preventive measures of Cockroaches . The product is designed for protection of Human life, pet in Indian lands , gardens , Food-factories , farm to fork from troubles of Cockroaches & ecto-parasites . Behavior of Cockroach is to move slowly in a deliberate and investigatory manner actively at night.

In our experiments we have seen Cockroaches responses to the repellent in as near to natural-normal conditions as possible , so we recommend to apply CockmaX Powder by spread on the ground across an area where it is desired to prevent or discourage Cockroaches from entering . Preferably , the Powder should be spread in a strip 10- 30 centimeters wide, although generally the wider the strip the better. In this manner , an odour & contact barrier of CockmaX is provided to which Cockroaches are reluctant to cross . Additionally , a smaller amount of the product may be scattered in diffuse or non -continuous manner just beyond the strip , on the side away from the area to be protected . This added scattering of the repellent serves to lessen the probability of occasional Cockroaches wandering beyond the strip . If barrier line is broken , CockmaX powder shall be re-applied on to repair the barrier , but protected from heavy rainfall . After heavy rainfall eroding soils the re-application shall be done . Though CockmaX powder soluble in water so doesn 't remains there in the same places still to ensure protection reapplication is recommended . In experiment bugs exhibited even overt avoidance of the repellent , and if sometimes some bugs try to cross the repellent . These exhibited avoidance behavior first, eventually moving across the repellent strip while rubbing the head against the ground , seemingly attempting to escape from the repellent strip . Every time start treatment at interior sections working outward . Create complete perimeter around areas to be protected in every bed room after every 15 days (Not to be used by persons with dust allergies) . Keep away from children.

DIRECTIONS : CockmaX is a Solid non -aromatic powder available in bottle. The bottle content is 150 Grams. The person applying the CockmaX powder shall wear protective before placement of the powder like dust mask & goggle before start.

INGREDIENTS:

Proprietary Blend of natural Diatomaceous earth (See MSDS for all ingredient details.)

1. Break open powder-puff at tip targeting specific areas to be protected. Switch off fan, door, windows to keep air flow in control. Start scattering as bar-line marking at areas of Cockroaches occurrence to create an artificial barrier.
2. Dust the powder on the ground, linens, cloths, land areas from the opened powder-puff of the duster pump continuously without leaving any gap in strip of 10-30 cm.
3. Dust the CockmaX powder at all the parking areas, windows and door sides to take care of either hiding or entering places in home and premises. Mark the area if possible.
4. At Kitchen/ food places put in such a way that it will remain there for longer time as a dry (desiccant) killing material. Also at mounted wall piece, posture, photo-frame, electrical fixtures, bulbs, tubes in such a way that it will remain there for longer time as a safe residual material.

Pestomatic Controls®

Pest Management & Hygiene Consultant

Agriclinics & Agribusiness Centre

5. Apply at every 15 days to all the possible or hiding suspicious places while doing so you may find some insects, Ant, Tick, mite, louse etc rushing away getting repelled if hiding inside. Please, note CockmaX repels several pests but does not harm to Human, animals, frogs, pet & even birds.

Note: Disturb Natural food chain, natural habitat of Cockroaches they are enemies. They are most important part of scavengers food chain. The natural food cycle shall be broken at maximum possible ways. In exceptional case apply CockmaX in for preventive artificial barrier it is very necessary in human areas to keep bugs away, later it shall not be broken it's not required. Do attempt to cover very big buildings, entire Kitchens, Home, hotel, hospital, society, urban areas and entire premises use for Home, Hotel, Hospital & Food industry.

Disposal: The empty container & remaining, after use shall be disposed by deep burial in barren land safely.
Storage: Store below 30°C Temperature in cool dry place away from children. Made in the India.
